

NBI® Student instrument.

Duration: Online 25min.

This instrument for under 15 year olds measures your thinking preferences as a student. Why is it that some students prefer a quiet environment whilst others seem to work well with loud music and a messy workplace? Why are some students keen on Maths and Science whilst others prefer the arts and humanities?

Subject choices at school – and a career choice a little later – are key decisions for EVERY student!

Making the wrong choices can often lead to poor performance and years of frustration for the student, the teachers, and of course the parents. Making an informed decision, on the other hand, can lead to a lot of satisfaction and achievement, as well as promising the student an interesting and rewarding career.

This profile is for students who are still at school, under the age of 15, and who may be considering subject choices and later career paths.
